Filtrácia signálov - špeciálne (rekurentné) filtre

1. Priebežný priemer s nekonečnou pamäťou

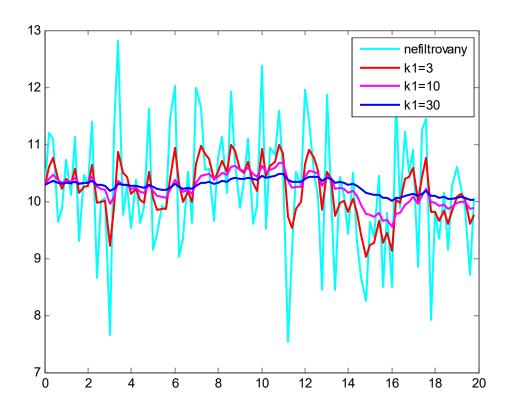

$$\hat{s}(k) = \hat{s}(k-1) + \frac{1}{k} \big(y(k) - \hat{s}(k-1) \big)$$

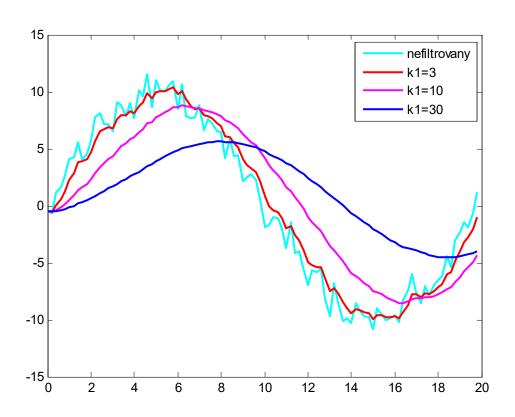

2. Priebežný priemer s konštantným koeficientom korekcie

$$\hat{s}\!\left(k\right)\!=\hat{s}\!\left(k-1\right)\!+\!\frac{1}{k_{_{1}}}\!\left(y\!\left(k\right)\!-\hat{s}\!\left(k-1\right)\!\right)\!=\!\frac{k_{_{1}}\!-\!1}{k_{_{1}}}\hat{s}\!\left(k-1\right)\!+\!\frac{1}{k_{_{1}}}y\!\left(k\right)$$

3. Priebežný priemer s konečnou pamäťou

$$\boldsymbol{\hat{s}}\!\left(\boldsymbol{k}\right) = \boldsymbol{\hat{s}}\!\left(\boldsymbol{k}-1\right) \!+\! \frac{1}{N}\!\left(\boldsymbol{y}\!\left(\boldsymbol{k}\right) \!-\! \boldsymbol{\hat{s}}\!\left(\boldsymbol{k}-N\right)\!\right)$$
